

Ideation Phase:

Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking

Date	31 January 2025
Team ID	- SWTID-2026-3651
Project Name	Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking
Marks	2 Marks

Problem Statement	I am	I'm trying to	but	because	Which makes me feel
PS-1	I am a system administrator	Swentim streamline data import processes in ServiceNow	the import sets are tedious to configure and map	there are too many manual steps and repetitive work	
I am	a system administrator	Streamline data import processes	the import sets are tedious to configure	data is often mismatched or lost during the import process	
but	the import sets are tedious to configure	But the import sets are tedious to configure and map		Data is often mismatched or lost during the import process	

Problem Statement	I am	I'm trying to	but	stressed
PS-1	a system administrator	I'm trying to link imported data to existing records automatically	data is often mismatched or difficult	The mapping and relationship configuration is error-prone
but	the import sets are tedious to configure and map	because it's hard to navigate and set up relationships between records	it's hard to navigate and	The mapping and relationship configuration is error-prone
which	which makes me feel	Frustrated	overwhelmed	stressed

Ideation Phase:

Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking

Date	31 January 2025
Team ID	SWTID-2026-3651
Project Name	Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking
Marks	2 Marks

Step 1: Brainstorm and Group Ideas

Brainstorm and list as many ideas as possible. Group similar ideas together to identify key solutions.

Simplify Configuration	Improve Matching	Automate Steps	Enhance Usability
User-friendly mapping Pre-built templates Mapping guides Suggest field mapping Dot-walk-auto-lookup	Advanced matching Auto-suggest matches AI-based matching Fuzzy matching Match confidence scores	Scheduled imports Predefined workflows Auto-relationship creation Error handling automation	Clear setup instructions Detailed documentation Tooltips and guides Tutorials and help tips

Step 2: Prioritize the Best Ideas

Evaluate and prioritize the best ideas based on their impact and effort. Focus on ideas with high impact and low effort for quick wins.

■ Simplify Configuration
■ Improve Matching
■ Automate Steps
■ Enhance Usability

Marks:	4 Marks

Brainstorm & Idea Prioritization Process

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative process that leads to problem solving. Prioritizing volume over, out-of-the-box ideas and the ideas are well-critiqued and built upon, and, all participants are encouraged to collaborate together to generate a rich amount of creative solutions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

 Brainstorm & idea prioritization Breaking the ice. Generate statement or problem to be solved to brainstorm. Encourage free and open brainstorming, focusing on import sets and dot walking. ☐ Prioritize all ideas ☐ Better is than great ☒ Focus on import and effort	 Problem statement Automating data import and relationship mapping using import sets and dot walking ☐ No solution  Brainstorming Generate ideas, brainstorming is free and open, and, all participants are encouraged to collaborate together to generate a rich amount of creative solutions.  Category This is the problem statement, focusing on the relationship between the data and the data.  Final idea to solve the problem The final idea to solve the problem is the final idea to solve the problem. ☐ No solution	 Problem statement Automating data import and relationship mapping using import sets and dot walking ☐ No solution  Problem statement Automating data import and relationship mapping using import sets and dot walking ☐ No solution  Problem statement Automating data import and relationship mapping using import sets and dot walking ☐ No solution  Problem statement Automating data import and relationship mapping using import sets and dot walking ☐ No solution

Empathy Map Canvas

Empathy Map

What does he THINK AND FEEL?

- * Frustrated by manual mapping
- Open to take for this mapping screen.
- Worried data might not be correct
- See potential for automation.

What does he SEE?

- There are new tools out there
- Don't forget to do it right with new tools
- It works, but...

What does he HEAR?

- Colleagues advice on better ways to import colleagues, relearn other tools
- New software versions and automation techniques

What does he SAY AND DO?

- Say: "This takes you time"
- Resigned to manual mapping options.
- Were shared information yet works.
- Advocates for more automation

PAINS

- Hard to find relevant records
- Unclear/confusing joining rules
- Constant manual matching

GAIN

- Confidence
- Accuracy

GAINS

Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking

Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and
